Experience

Gameplay Programmer (Unity C#)

Junior Major

February 2025 - Present

- Led development of Road Smart Interactive, an iOS app for high school students learning about road safety
- Working closely with artists, project managers, and other programmers to deliver a 30-iPad networked classroom solution.
- Technologies used: Unity (C#), Git, iOS deployment (XCode / Testflight), Unity built-in networking
- [Road Smart Interactive Website](#)

Game Developer (VR) (Unity C#)

Neuromersiv (Contract)

September 2024 - December 2024

- VR Developer on Ulysses, a VR rehabilitation application using hand-tracking and immersive training simulations to improve motor function in stroke patients
- Worked directly with patients and caregivers to test and refine functional gameplay and UX elements
- Technologies used: Unity (C#), Git, Android deployment (Quest 3)

Gameplay Programmer (VR) (Unity C#)

Eyejack (Contract)

April 2024 - February 2025

- Gameplay programmer on Dream Machine, a networked VR art / music performance piece orchestrated by Nona Hendryx and shown at the Lincoln Centre in New York in 2024
- Collaborated with technical artists, UI/UX designers, and a team of Unity programmers to deliver the project on a tight deadline
- Technologies used: Unity (C#), Git, Android deployment (Quest 3 headsets), profiling and optimization for graphically intensive scenes on mobile hardware, networking using Normcore to connect groups of simultaneous VR users
- [Dream Machine Website](#)

VR Developer (Unity C#)

uCat (Co-Founder)

November 2022 - October 2024

- Developed a working prototype of a Brain-Computer Interface (BCI) pipeline and associated VR application for neural speech processing in locked-in patients (<https://ucat.app>).
- Fast-paced startup culture; gained experience in working autonomously, writing technical documentation and functional diagrams, and building technology to aid in research outcomes.
- Technologies used: Unity (C#), Git, Android (Quest 3), profiling/optimization, LLM speech agent integrations
- [uCat Video Demo](#)

Fullstack Web Developer (VueJS, Laravel/PHP)

Engineroom

June 2022 - July 2023

- Developed and maintained front-end (VueJS) and backend (PHP/Laravel) systems for the Engineroom business intelligence platform
- Introduced a lightning talks initiative to promote knowledge sharing
- Technologies used: VueJS, PHP, Laravel, Git, Github CI/CD workflows

Front End / Game Developer (ReactJS, Unity C#)

Deepend

November 2021 - June 2022

- Used various front-end technologies, mainly React, Typescript and Vue, to create responsive web applications for clients such as Reachout, Coleman Grieg and Essential Energy
- Built and maintained Sound Storm, a Unity (C#) iOS application for children with spatial processing disorder
- Initiated and led weekly meditation sessions to promote employee wellbeing
- Technologies used: Unity (C#), ReactJS, Vue, Typescript, Wordpress, Git
- [SoundStorm App Website](#)

Game Developer (Unity C#)

Tech Gym (Contract)

November 2017 - June 2018

- Developed a Unity (C#) application which integrated with a UR3 robotics system to help stroke patients regain their upper limb function through interactive games
- First exposure to professional Unity work, in exciting startup environment
- Technologies used: Unity (C#), UR3 Robotic system integration
- [Tech Gym Video Demo](#)

Education

UNIVERSITY OF TECHNOLOGY, SYDNEY

Bachelor of Music and Sound Design

Graduated 2018

- Achieved High Distinctions (90%+) in *Intro to Games Programming* and *Games and Graphics Project* subjects
- Minored in Environmental Studies

CODER ACADEMY, SYDNEY

Diploma of Information Technology (Fullstack Web Development)

Graduated 2018

6-month intensive bootcamp covering core programming principles. Studied frontend and backend technologies (Javascript (Vanilla JS, Node, React), Ruby on Rails, HTML/CSS).

University Projects

Virtual Live Audio Engineer (UTS)

2018

- Major work for Games and Graphics project - a VR Audio Engineering training simulator built in Unity (C#)
- Handled the entirety of the project, including planning, development, testing and documentation
- Technologies Used: Unity C#, Oculus Rift headset (Later Quest 3)
- Received a High Distinction (91%) for the project
