PROFILE

I am a hard-working, creative, and autonomous Software Engineer and Gameplay Programmer. I specialize in creating immersive and interactive experiences that aim to bring joy to the world.

SKILLS

- Unity (C#) Game Development
- C++ (SFML)
- Meta XR SDK Development (Quest 2/3)
- Networking (Normcore)
- Frontend Javascript: ReactJS / TypeScript / VueJS
- Backend Javascript: NodeJS/ Express
- Git / Github
- Testing (Jest, Cypress)

EDUCATION

DIPLOMA OF INFORMATION TECHNOLOGY (FULL STACK WEB DEVELOPMENT)

Coder Academy Sydney
Feb - Aug 2019

BACHELOR OF MUSIC AND SOUND DESIGN

University of Technology Sydney
2015 - 2018

EXPERIENCE

UNITY DEVELOPER - MOBILE

Junior Major

February 2025 - Present

Designed and implemented an educational game for high school students focused on road safety using Unity (C#). Integrated with Apple deployment pipelines (Xcode, TestFlight) to support regular testing and iterative development. Delivered interactive, gamified learning experiences tailored for tablet devices.

UNITY VR DEVELOPER – NEUROMERSIV ULYSSES (UPPER LIMB STROKE THERAPY)

Neuromersiv

September - December 2024

Contributed to the development of Ulysses, a VR rehabilitation application leveraging hand-tracking and immersive training scenarios to improve motor function in stroke patients. Used Unity to develop therapeutic mini-games and interactive environments. Conducted ongoing user testing with patients and caregivers to refine gameplay mechanics and UX.

UNITY DEVELOPER – DREAM MACHINE VR (MULTIPLAYER WEBXR EXPERIENCE)

EyeJack

April 2024 - September 2024

Led development on Dream Machine VR, a multiplayer WebXR art and music experience produced by Nona Hendryx. Built a performance-optimized Unity application with rich audio-visual effects, synchronised multiplayer interactions, and WebXR browser deployment. Oversaw design, development, and testing for a high-traffic public showcase

VR PROTOTYPING DEVELOPER – UCAT BCI/VR SPEECH INTERFACE

November 2022 - October 2024

Built a functional prototype for connecting brain-computer interface (BCI) inputs to a Unity-based VR application, enabling neural speech interaction for locked-in patients. Collaborated with neuroscientists and hardware researchers in a fast-paced startup environment to create real-time, immersive feedback loops based on neural signals.

FULL STACK WEB DEVELOPER – ENGINEROOM ANALYTICS PLATFORM

Engineroom

June 2022 - July 2023

Maintained and developed frontend (Vue.js) and backend (PHP, Laravel) systems for a business intelligence platform. While primarily focused on web tools, also contributed to internal initiatives and knowledge sharing (e.g., lightning talks), reinforcing a collaborative engineering culture.

FRONT END / GAME DEVELOPER

Deepend

Nov 2021 - June 2022

Worked across multiple client projects using React, Vue, and TypeScript to deliver responsive web applications for brands like ReachOut and Essential Energy. Notably developed **Sound Storm**, an internal Unity (C#) mobile game for children with spatial processing disorder, demonstrating a strong ability to design for accessibility and serious games.

CONTRACT DEVELOPER – SAMPLE LAB (REACT + NODE.JS WEB APP)

XPO Brands

Feb 2021 - May 2021

Delivered a production-ready, responsive web application for Sample Lab's smart vending platform. Used ReactJS and NodeJS to create a secure API-backed interface, integrating AWS cloud functions for SMS and email confirmations.
